

Thilina Dissanayake

Intern Software Engineer -BEng (Hons) Software Engineering

0701479106 | dissanayakedrt94@gmail.com | Kegalle Sri Lanka

www.linkedin.com/in/thilina-dissanayake-29587027b | <https://github.com/ThilinaDiss94>

Motivated Software Engineering undergraduate with a strong interest in software development and emerging technologies. Skilled in problem-solving and software development through academic and personal projects. Eager to apply my knowledge, gain industry experience, and contribute to real-world software solutions through an internship opportunity.

Technical Skills

- **Languages:** JavaScript, Java, Python, Dart, HTML/CSS
- **Frontend:** React.js, React Native, Flutter
- **Backend:** Node.js, Express.js
- **Databases:** MySQL, MongoDB, Firebase
- **Tools:** Git / GitHub, Jira, JavaFX

Education

BEng(Hons) Software Engineering Undergraduate 2024- 2028

University of Westminster (delivered at IIT, Colombo)

Relevant modules: Software Development, OOP, Database Systems, Web Design & Development, Algorithms, Machine Learning , Computer System Fundamentals, Mathematics for Computing ,Software Engineering project principles

Foundation Certificate in Higher Education 2023-2024

Informatics Institute of Technology, Colombo

St.Mary's College Kegalle 2011-2019

G.C.E. O/L Examination (2016)/ 3 A's , 2 B's , 3 C's , 1'S

Certification

Python for Beginners - University of Moratuwa

Web Development for Beginners - University of Moratuwa

MERN Stack Development Course – Skyrek Academy

Projects

European Airports Traffic Analysis System

Technologies Used: Python | Data Analysis | CSV Processing | Data Visualization

Developed a Python-based airport traffic analysis system to process and analyse large-scale airport operational data collected over multiple years. Implemented data validation, filtering, and statistical analysis techniques to identify passenger and flight traffic trends. Generated automated reports and visualized key insights using histograms and graphical representations, enabling efficient interpretation of transportation data and supporting data-driven decision making

Employee Performance Management System

Technologies Used: Java | Object-Oriented Programming | File Handling

Designed and developed a console-based employee management system using object-oriented programming principles. Implemented employee registration, performance tracking, searching, sorting, and file storage functionalities. Applied concepts such as encapsulation, modular design, and file handling to improve maintainability and data management.

Sustainable Development Goals (SDG) Website

Technologies Used: HTML | CSS | JavaScript | Responsive Web Design

Developed a responsive website focused on promoting awareness of United Nations Sustainable Development Goals (SDGs). Designed interactive user interfaces and implemented dynamic web elements to enhance user engagement. Applied front-end development principles to ensure accessibility, responsiveness, and cross-browser compatibility.

FixMate – Smart Service Booking Mobile Application

Technologies Used: Flutter | Firebase Authentication | Cloud Firestore | OpenStreetMap | Geolocator | REST APIs | Git | GitHub | Agile Development

Developed a mobile service booking application using Flutter and Firebase that connects customers with service providers for home maintenance and repair services. Implemented user authentication, booking management, real-time location tracking, and in-app messaging features while collaborating in an Agile development environment.

Loan Approval Prediction & Loan Amount Estimation System

Technologies Used: Python | Scikit-learn | Pandas | NumPy | Machine Learning

Developed an AI-powered loan risk assessment system to assist financial institutions in making data-driven lending decisions. Performed data preprocessing, feature engineering, and exploratory data analysis on large financial datasets. Implemented and compared multiple machine learning algorithms including Logistic Regression for binary classification, Naïve Bayes for probabilistic prediction, and K-Nearest Neighbors (KNN) for similarity-based decision making. Evaluated model performance using Precision, Recall, F1-Score, and ROC-AUC metrics. Additionally, developed regression models to estimate maximum eligible loan amounts based on applicant financial profiles.

Key AI Concepts Applied: Supervised Learning, Classification, Regression, Feature Engineering, Model Evaluation, Hyperparameter Tuning.

Soft Skills

Problem Solving | Teamwork & Collaboration | Communication Skills | Time Management | Adaptability & Quick Learning | Critical Thinking & Decision Making
